

Sets Review

Ms. Duffy

Day 1

Notation

Subsets

Note: **Answers** to practice questions
are in **red**

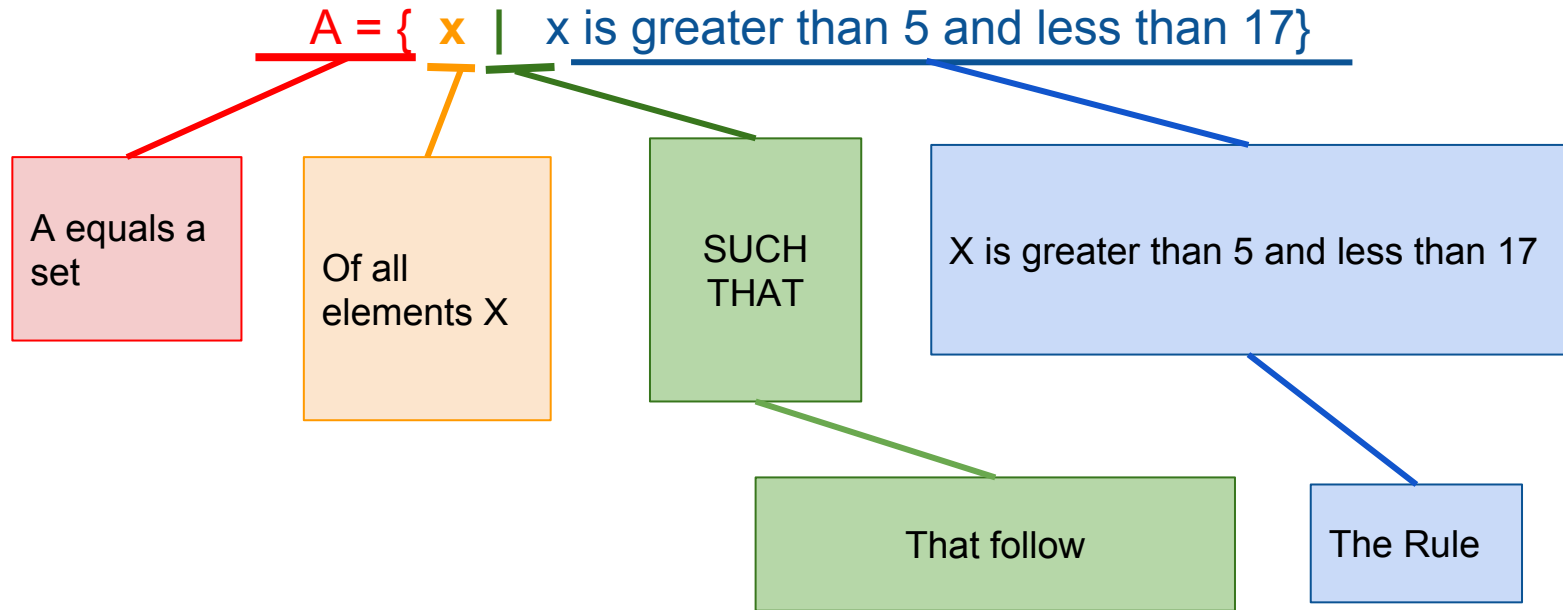

What is a set?

A **set** is a clearly defined collection.

What are elements?

The items in a set are referred to as the **elements** of a set.

$$A = \{ x \mid x \text{ is greater than } 5 \text{ and less than } 17 \}$$

Set Notation

Writing out the rule

- Capital letter to name the set
- Open curly brackets
- $X \mid X$ is ...
- Make sure rule clearly defines the set
- Close curly brackets

$A = \{ x \mid x \text{ is a natural number less than } 5 \}$

Writing out the elements

- Capital letter to name the set
- Open curly brackets
- Commas to separate elements
- Close curly brackets

$A = \{4, 3, 2, 1\}$

WHAT WENT WRONG?

WHAT WENT WRONG?

$$c = \{x \text{ is a whole number}\}$$

WHAT WENT WRONG?

$c = \{x \text{ is a whole number}\}$

$C = \{x \mid x \text{ is a whole number}\}$

WHAT WENT WRONG?

$$M = \{x \mid 4, 5, 6, 7\}$$

WHAT WENT WRONG?

$$M = \{x \mid 4, 5, 6, 7\}$$

$$M = \{4, 5, 6, 7\}$$

WHAT WENT WRONG?

$A = x \mid x \text{ is an even number}$

WHAT WENT WRONG?

$A = x \mid x \text{ is an even number}$

$A = \{ x \mid x \text{ is an even number} \}$

WHAT WENT WRONG?

$b = \{x \mid x \text{ is a whole number greater than 5, less than 9}\}$

$B = \{x \mid x \text{ is a whole number greater than 5, less than 9}\}$

\in

This symbol means “is an
element of”

$$5 \in A$$

5 is an element of A

\notin

This symbol means “is not an element of”

$7 \notin A$

7 is NOT an element of A

null set (or empty) set is

a set that contains **NO** elements

Example: The set of the names of people in the world taller than 4 metres.

\emptyset or $\{ \}$

The symbol for the **null set (or empty) set**

\emptyset or $\{ \}$

When are two sets equal?

Two sets are equal only if they contain the EXACT same elements.

Breakdown the word

Sub

Set

What does “sub” mean?

sub- | sʌb, səb | prefix

1 at, to, or from a lower level or position: *subalpine*.

- lower in rank: *subaltern* | *subdeacon*.

- of a smaller size; of a subordinate nature: *subculture*.

SUB SET = Smaller Set

2 somewhat; nearly; more or less: *subantarctic*.

3 denoting subsequent or secondary action of the same kind: *sublet* | *subdivision*.

4 denoting support: *subvention*.

5 *Chemistry* in names of compounds containing a relatively small proportion of a component: *suboxide*.

You can think of a **subset** as a set that “fits inside” of another set.

**** Only write each element once ****

3 is an element of A and B

2 is an element of A and B

4 is only an element of A

$$A = \{ 4, 3, 2 \}$$

$$B = \{ \quad 3, 2 \}$$

Set B is a **subset** of Set A if every element of B is **also** an element of A.

$$A = \{ 4, 3, 2 \}$$

$$B = \{ 3, 2 \}$$

3 is **also**
an
element of
A

2 is **also**
an
element of
A

ALL elements in the subset can match to elements in the larger or equal set.

$$A = \{ 4, 3, 2 \}$$

$$B = \{ \quad 3, 2 \}$$

Is a subset always smaller?

Set B is a **subset** of Set A if every element of B is also an element of A.

$$A = \{ 1, 2, 3 \}$$

$$B = \{ 1, 2, 3 \}$$

Set B is a **subset** of Set A if

every element of B is **also** an element of A.

Justify which box contains a set and its subset.

A

$$M = \{ 4, 3, 2 \}$$

$$N = \{ 7, 3, 2 \}$$

B

$$L = \{ 0, 3, 9 \}$$

$$P = \{ 3, 9, 0 \}$$

Justifying Your
Ideas Properly

Restate what you
are justifying

Box B contains a set and its subset
because every element of L is also an
element of P.

Use "because"

Give the
reason the
statement is
true

Create three subsets that fit inside of Set B.

$$B = \{3, 5, 7, 9, 11, 13, 15, 17\}$$

Any answer that ONLY uses the elements in B is correct.

Example answer :

$$C = \{3, 5\}$$

$$D = \{3\}$$

$$E = \{3, 5, 7\}$$

Create three subsets that fit inside of Set B.

$$B = \{3, 5, 7, 9, 11, 13, 15, 17\}$$

Why is $M = \{3, 4, 5\}$ not a subset of B?

M is not a subset of B because not every element of M can be found in B.

OR

M is not a subset of B because there is an element in M that is not in B.

\subset

Translates to “is a subset of”

$$A \subset B$$

A “is a subset of” B

$$B \subset A$$

B “is a subset of” A

$\not\subset$

Translates to “is NOT a subset of”

$$A = \{2, 3, 4\}$$

$$B = \{2, 3\}$$

Which is true?

$$A \subset B$$

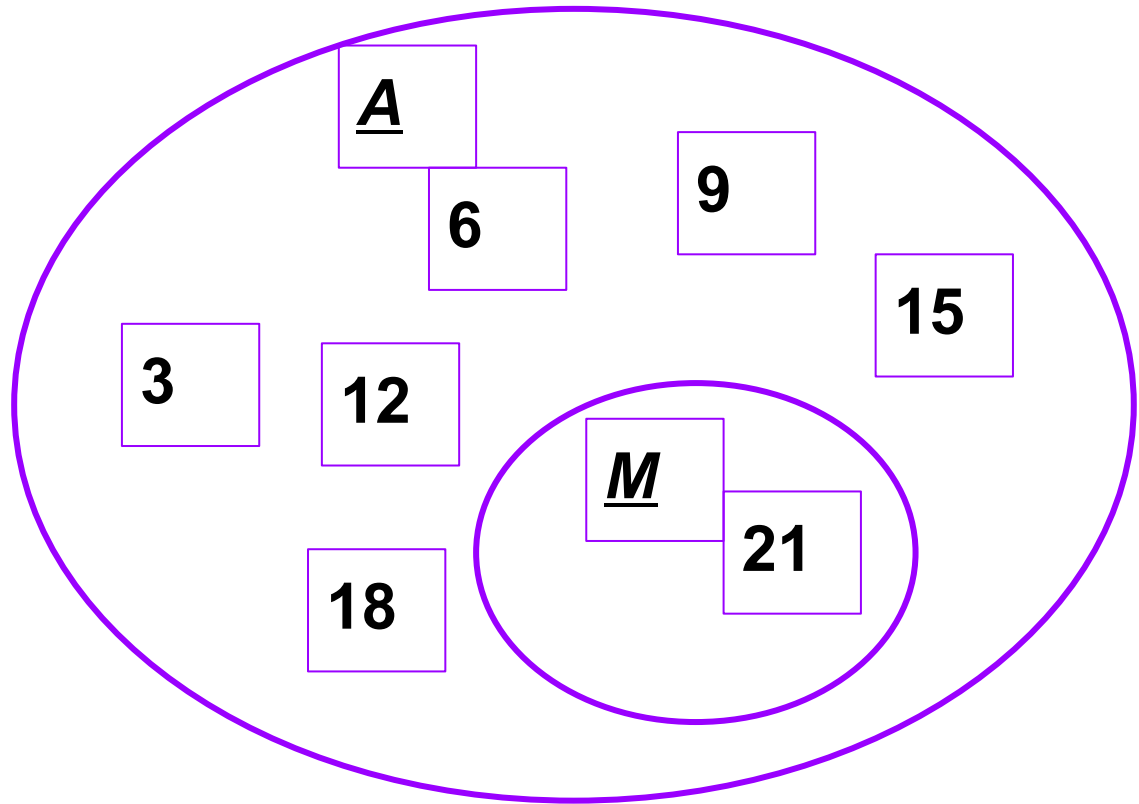

$$B \subset A$$

How do you know the other is
not true?

$B \subset A$ is true B is a subset of A . We know B is a subset of A because every element of B can be found in A .

$A \subset B$ is not true because A is not a subset of B . A is not a subset of B because every element of A cannot be found in B .

List the elements of A and the elements of M.

$$A = \{3, 6, 9, 12, 15, 18, 21\}$$

$$M = \{21\}$$

$$M = \{4, 8, 12, 16\}$$

$$N = \{2, 4\}$$

$$O = \{12, 16\}$$

Which of the following is true? How do you know?

a. $M = N$

b. $O \subset N$

c. $N \not\subset M$

Justify why the other two options are not true.

$N \not\subset M$ is true because N is not a subset of M .

N is not a subset of M because not every element of N can be found in M .

$M = N$ is not true because M and N do not have exactly the same elements.

$O \subset N$ is not true because every element of O cannot be found in N .

List the elements of Sets B and K.

$B = \{ x \mid x \text{ is an even, natural number greater than 17 and less than 25} \}$

$K = \{ x \mid x \text{ is a lowercase letter of the English alphabet in print that a curve is always used to make} \}$

Ex. p has a curve in it
x does not have a curve in it

$$B = \{18, 20, 22, 24\}$$

$$K = \{a, b, c, d, e, f, g, j, o, p, q, r, s, u\}$$

True or False?

If false, make the expression true using correct set notation.

1. $3 \in A$
 2. $0 \in A$
 3. $7 \notin A$
 4. $M \in A$
 5. $9 \notin A$
 6. $A \notin M$
-

7. What could be a rule for Set A?

Express it, using proper set notation.

8. What could be a rule for Set M?

Express it, using proper set notation.

1. True
2. True
3. False. 7 is an element of A.
4. False. M is a subset of A.
5. False. 9 is an element of A.
6. False. A is not a subset of M.

7. A possible rule for set A could be the set of integers greater than -1 and less than 10.

8. A possible rule for M is the set of integers that cannot be a denominator in a fraction.

Day Two

Union and Intersection

Cardinality

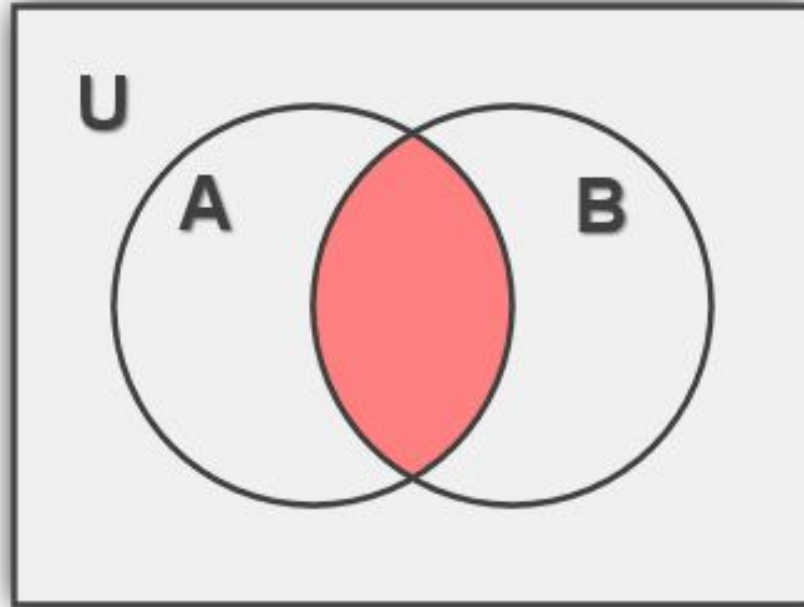

Complement

Visualising Union and Intersection

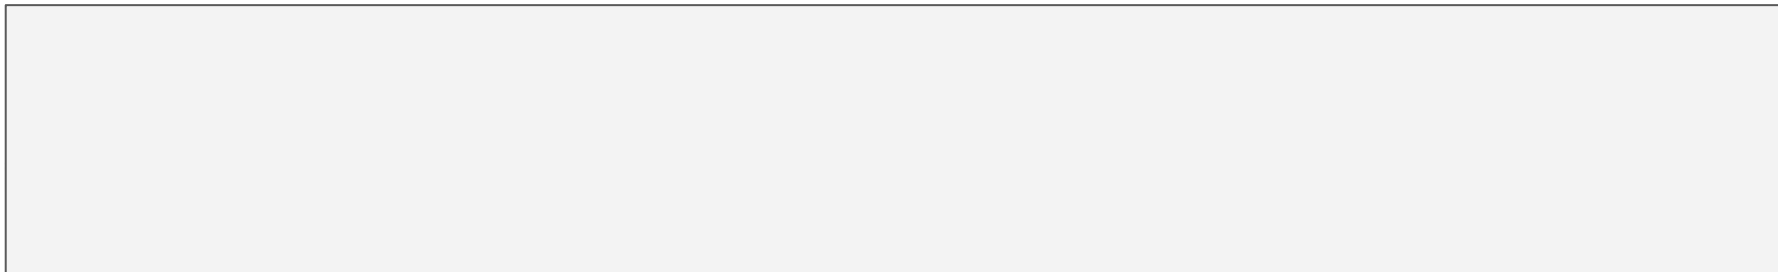

Shade the Venn Diagram to represent Union.

Shade the Venn Diagram to represent Intersection.

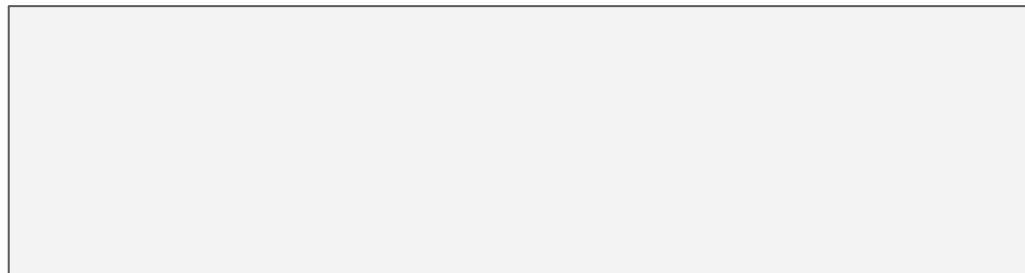

The **intersection** of two sets is the set of elements in common to both.

\cup $=$ 

\cap = "*intersect*"

$A \cap B$ =

\cap = "*intersect*"

$A \cap B$ = A "*intersect*" B

The **union** of two sets A and B is found by putting together in a new set all of the elements of A and B

**** Only write each element once ****

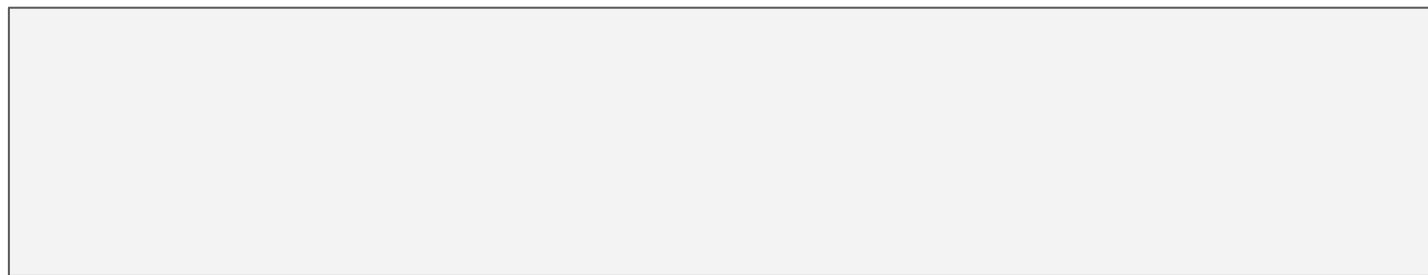

U

=

$\cup = \text{"union"}$

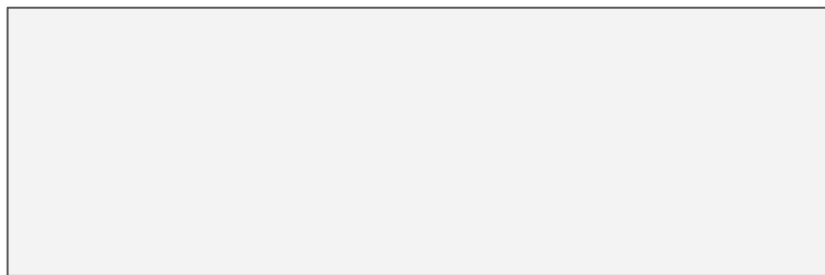

** just think \cup for Union*

$\cup = \text{"union"}$

** just think \cup for Union*

$A \cup B =$

$\cup = \text{"union"}$

** just think \cup for Union*

$A \cup B = A \text{ "union" } B$

Cardinality refers to **the number of items in a set**

Symbol is a hashtag # A = number of items in A

$$\# A = 5$$

Cardinality refers to **the number of items in a set**

Symbol is a hashtag # A = number of items in A

$$\# A = 5$$

Cardinality refers to **the number of items in a set**

A =

B =

Cardinality refers to **the number of items in a set**

$$\# A = 5$$

$$\# B = 2$$

Complement of A refers to the set of items NOT in A

The symbol for finding the complement is an apostrophe.

A' = the set of everything NOT in A

A' =

Complement of A refers to the set of items NOT in A

The symbol for finding the complement is an apostrophe.

A' = the set of everything NOT in A

A' = {3, 2}

$$A' =$$

$$A \cup B =$$

$$\#A =$$

$$(A \cup B)' =$$

$$A \cap B =$$

$$\#(A \cap B) =$$

The forms top favorite movies

SING

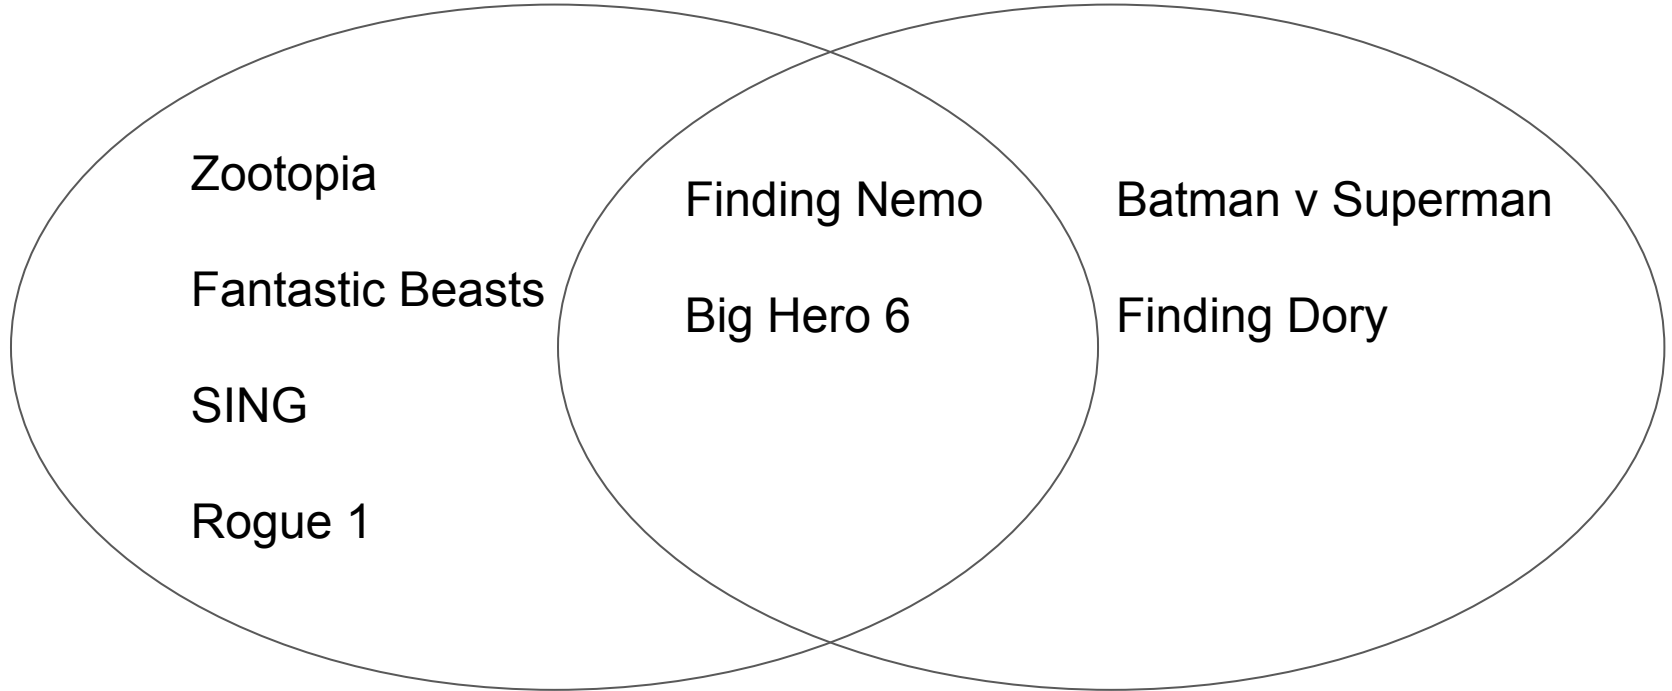

Rogue 1

Finding Nemo

Big Hero 6

Batman v Superman

Finding Dory

- 1) How would you describe where *Big Hero 6* and *Finding Nemo* are?
- 2) How would you describe where *Batman vs Superman* and *Finding Dory* are?

Put the following sets into the Venn Diagram.

$$U = \{2, 4, 6, 8, 10, 12, 14, 16, 18, 20\}$$

$$C = \{x \mid x \text{ is a multiple of } 4\}$$

$$H = \{x \mid x \text{ is a multiple of } 3\}$$
