

FINAL TEST

Read the questions and colour the answers in the text

1. What is the Universe? **BLUE**
2. What does the Universe include? **RED**
3. What are stars? **PINK**
4. What is the Solar system made up of ? **GREEN**
5. What is a planet? **ORANGE**
6. What are asteroids? **VIOLET**
7. What is the Sun? **BROWN**
8. Why is the Earth called the blue planet? **BLACK**
9. How many light years is the visible Universe across ? **YELLOW**

THE UNIVERSE

The Universe is everything we can touch, feel, sense, measure or detect. It includes living things, planets, stars, galaxies, asteroids, dust clouds, light, comets or meteorites.

The Universe contains billions of galaxies, each containing millions or billions of stars. Stars are balls of burning gas seen as lights in the sky at night.

The Milky Way is the Galaxy which contains our Solar system. Our Solar system is made up of the Sun, planets, asteroids, comets, meteorites that moves around the Sun. A planet is a mass of rock or of gas, while asteroids are rocky objects. The Sun is the star that provides light and heat for the Earth. The Earth is called the blue planet because it is rich of water.

The Universe is incredibly huge. The visible Universe is at least 93 billion light years across.
