

The Modern Approach to Engineering Mathematics

Author:

K.KUMARAVELU

Topic:

Calculus, Complex Numbers, Differential Calculus, Integral Calculus, Limits, Matrices

The Modern Approach to Engineering Mathematics

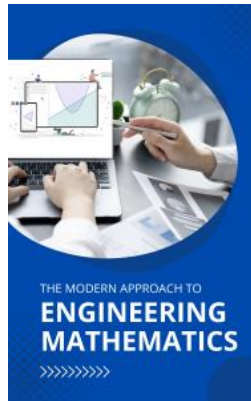

Table of Contents

- **Matrices and Determinants**
 - **Algebra of Matrices**
 - **Algebraic Operations on Matrices**
 - **Algebraic Operations on Matrices - Order 3**
 - **Determinant of a 2 x 2 Matrix**
- **Permutation**
 - **Permutations**
- **Complex Numbers**
 - **Vieta's Formula for Quadratic Equations**

- Algebraic operations on Complex Numbers
- Trigonometry
 - Trigonometric Ratios and their Functions
- Differential Calculus - Limit
 - Limit of a Function
- Differential Calculus - Derivative of a Function
 - Derivative of a Function
 - The derivative of a constant function is zero
 - The power function $y=x^n$, $n>0$ is an integer
 - Derivative of the logarithmic function
 - The cosine function, $\cos x$
 - The tangent function, $\tan x$
 - The derivative of arcsine x
 - The derivative of $\arccos x$
 - The derivative of $\arctan x$
 - Derivative of a Function
- Analytical Geometry - Conics

- General equation of a Conic
- Conic Sections
- Vector Algebra - Addition of two vectors
 - addition of two vectors
 - Addition of two Vectors in Three Dimensional
- Integral Calculus 1
 - Integral Calculus
 - A solid obtained by revolving area about on x axis
- Definite integrals
 - Definite Integrals
